

KLASSETRIVSEL X TILAA

# YOUR CHILD'S WELL-BEING IN AN APP

# A CONVERSATION WITH...

Writing lesson plans, monitoring children's progress, and, of course, teaching: being an educator nowadays entails much more than simply teaching. School professionals are also responsible for monitoring each child's social development and well-being. With its software *Klassetrivsel*, the Danish company *Skolevisioner* has found a way to simplify these additional tasks.

*Klassetrivsel* (class well-being) is a Danish product, but it is also used in Norway. It allows relevant professionals to digitally record a child's social well-being. Teachers, pedagogues, and municipal school advisers are examples of relevant professionals. Irene Gadegaard, responsible for communications at *Klassetrivsel*, informs us not only about the product, but also about what it takes to make this as safe as possible.

# KLASSETRIVSEL

SOCIAL DEVELOPMENT AND WELL-BEING FOR EACH CHILD

## How does Klassetrivsel work?

'Klassetrivsel is a SaaS program that can be used by children aged 4 to 18. It is primarily used in schools to assess and record a child's well-being. Skolevisioner (ed. translated as school vision) provides the software and users are free to create their own questions and surveys. The expert is always in command; one uses it once a month, the other once every six months. As a result, the school gains the necessary insight into the students' current relationships and well-being in a clear, simple, safe, and time-saving manner. With this knowledge, one can improve the daily lives of all students in the school.'

## And how did the concept for Klassetrivsel emerge?

'Our founder, Lars du Jardin Nielsen, has a background in education as well. He is aware of how many administrative tasks are required to properly monitor a child. This is why he developed Klassetrivsel. His expertise ensures that our product meets the needs of our users.'

The product's main strength is that professionals must do the work anyway, for example in a different way, such as in Excel sheets. This takes time and effort. With Klassetrivsel, you do the same work you always did, but you can track and learn from the results much more easily. Work smarter rather than harder.'

## What distinguishes Klassetrivsel from others?

'Although there are (or have been) other parties doing similar things, there is currently little competition, owing in part to the closure of a number of businesses. For example, they were unable to guarantee secure data storage. We also get along well in Norway, especially because the school system is similar to ours. We are now investigating which European country could be next.'

Furthermore, sociograms are a unique feature of Klassetrivsel. These diagrams can combine given answers. You can see how a child interacts with other students in their class at a glance. In conclusion

Klassetrivsel is ideal to work with; we adhere to all regulations and can be deployed at any time. In Denmark and Norway we are now used by more than 1600 school communities (more than 50% of all public schools in Denmark).'

**'A server that we can expand into an environment that is completely tailored to our needs and the needs of our product'**

**Of course, data about children is extremely sensitive. How do you handle that in a careful way?**

'That's correct, there are various factors to consider. First and foremost, the constitution prohibits questions about religion, origin, sexual orientation, and

the like. However, we don't provide the questions, but the software. That is why all users must agree to the terms and conditions we establish to ensure children's safety and privacy.

There are numerous other rules in the field of compliance that we should be aware of. We have taken extra precautions to ensure that children's data is secure and can be deleted upon request (or automatically over time).

We chose to only work with Tilaa in the field of cloud infrastructure. This is because Tilaa works from the Netherlands and thus meets the stringent European standards that we must also meet.'

**Couldn't you have just gone to a Danish party?**

'Yes, we could have, but we chose Tilaa instead. This is due to the fact that the security is good, but also because we have many options on deploying. We are free to configure servers so that everything works properly for us.

Furthermore, working with Tilaa is simple; we use the configurator to build

a server that we can then expand into an environment that is completely tailored to our needs and the needs of the product.

All in all, we are very happy to be cooperating with Tilaa and we will be doing so for as long as our needs for a cloud service are met with the same quality as we experience today.'

# TILAA CLOUD

YOUR PREFERRED CLOUD PARTNER

## Focus on data security and data sovereignty

Tilaa places great importance on data security and data sovereignty. We are convinced that personal data, as well as data in a business context, is valuable. That is why we ensure quality and safety by certifying our processes and services in accordance with internationally recognized standards.

Would you like to learn more about the unique approach that distinguishes us from other European cloud providers? Then get in touch with one of our cloud experts. Or, try Tilaa for yourself by using our [configurator](#).
